

The Truth About HIV

What is it?

Human Immunodeficiency Virus (HIV) is a virus transmitted by infected body fluids. The virus attacks cells in the immune system.

Do I have it?

- Most people don't feel sick immediately after infection
- May start with fever, rash, joint pains, enlarged lymph nodes
- Other infections as a result of weakened immune system

How can I protect myself from HIV?

- Always use a condom correctly when having sex
- Get tested and encourage sexual partners to get tested
- Don't share needles with others

What do I do if I already have it?

- See a doctor
- HIV is not a death sentence; with treatment, you can live with HIV for years
